

PRODUCT DATA SHEET

SUBSTRATE

LIGHT•MIX®

WHAT IS LIGHT•MIX®?

If you want more control, Light•Mix® provides the ideal foundation for encouraging vigorous growth in seedlings, young plants and cuttings – right from the beginning. It gets the vital micro activity going as the water works with the soil, producing organic catalysts that rapidly develop root structures. Light•Mix® has also been specially blended to ensure optimal drainage throughout – an essential property if you use automatic irrigation systems.

The pH and EC values

Biobizz® products only contain natural organic elements rather than mineral salts such as magnesium or sulfates that you might find in synthetic fertilizers. This gives Light•Mix® a medium Electrical Conductivity (EC) value. And while its organic elements are impossible to measure, they do have a self-regulating system, which helps maintain the pH values at the correct level.

HOW TO USE IT

You can apply larger quantities of this fertilizer to any kind of plant, including heavy feeders, without the risk of overloading the soil and causing a nutrient burn – indicated by yellowing and crunchy, burnt tips on the leaves. With automatic watering it's important that the water properly infiltrates the substrate, or this can become too wet and cause mould to form.
